to the E of the fuel pier, is entered between a breakwater to the W of the entrance and Valdez Spit to the E of the entrance; both are marked by lights. Two seafood plant piers are just inside on the S shore. In June 2003, the controlling depths were 10.8 feet in the entrance channel to the basin, except for lesser depths to 7 feet along the edges of the channel, thence 10.4 to 12 feet in the basin, except for severe shoaling in the SE corner at the head of the project. The far E end of the basin is locally maintained and has depths of 10 to 12 feet. The harbor ...
